

Laser Processing

Spectrum Plastics Group is a leader in the manufacturing of laser high-precision products

Our manufacturing technologies, precision laser systems, design capabilities and cleanroom operations ensure the highest quality, performance and longevity of your products.

Our Services

Our team of experienced engineers and technical experts will collaborate with your design team to determine the right materials to use and what laser is best for your desired outcomes.

- Product R&D
- Design Facilitation
- Process Development
- Cleanroom Manufacturing and Packaging
- Inventory and Supply Chain Management

Our Capabilities

We have a proven approach to making your products that includes repeatable high precision features, collaborative project management, and scalable quality results. We're focused on your success.

- Laser Ablation & Coating Removal
- Laser Cutting & Drilling
- Wire Stripping
- Medical Balloon Laser Processing

Materials

Virtually any polymer material can be cut cleanly to create complex parts that traditional machining cannot make. Our teams have the experience and equipment to develop the laser-machining processes that will meet your dimensional requirements and tolerances.
